Number 39

## Glass Blowers Return to Work Friday Morning

Satisfactory Arrangements Made  
With the Glass Company

Members of the Glass Blowers Union, who have been out of employment in the Dominion Glass factory here, for some time have made satisfactory arrangements with the company and will return to work on Friday of this week.

This means that 18 journeymen, which represents 6 shops will be added to the staff and prospects are promising for steady work for them until their annual holidays next summer.

There will be the usual shifts working the same hours as they worked before.

These employees are largely occupied by blowing lamp chimneys and are experts for this class of glass work.

It will be good news for the workers and our citizens to learn the men are going back to work.

## Suggest Planting Trees Along Face of Dams

Will Help Prevent Injurious  
Wave Action

There are many advantages to be gained from planting a few trees around a dam, suggests Humphreys Station. Trees, especially willows, when planted along the face of a dam, serve as a form of riprap and the roots help bind the soil together, thus preventing erosion. Trees make fine shade and shelter for stock during the heat of the day in summer when they are lying around the water. A belt of trees properly situated in relation to the prevailing winds, will help prevent injurious wave action. A grove of trees affords 50 feet of protection for every

## Alberta Monratorium Postponement of Debt

Saskatchewan Govt Relieves the  
Farmers of \$ 75,000,000

After studying the effect of the passing of a monratorium by Alberta government, many have come to the conclusion that Alberta citizens are of getting as saving a proposition as the citizens of Saskatchewan.

In the past year farmers in Saskatchewan have been relieved of \$75,000,000 of debt. That is the amount of debt of government, municipalities loan companies etc. written off voluntarily—not a law passed. That amount does not include many more millions written off voluntarily by the banks of Saskatchewan. The action of Saskatchewan creditors was taken at the suggestion of the Saskatchewan government.

The monratorium in Alberta has only made the postponement of payment of debt. When the monratorium here is eventually lifted, the farmers will face just as much debt as ever. No adjustment on a blanket scale has been attempted in Alberta. A law has been in Saskatchewan.

## SPECIAL SHOW

On Friday and Saturday Sept 2nd and 4th there will be a special show in the Empress theatre for adults only. The most dramatic picture of the year is entitled "Sins of Love." All matinees are for ladies only and evening shows are for men only. No one under 21 will be admitted to either shows.

foot in height, that is, a shelterbelt 15 feet high would give protection for a distance of approximately 750 feet from it. Besides being useful, a few trees around a reservoir make a beautiful spot of what would otherwise be just another water-hole in the prairie.

## Local Gun Club is Making Good Progress

Had First Practice At Range  
This Week

The progress has already been made by officials of the local Gun Club which was organized last week.

Trap shooting equipment has been installed on the prairie west of town near the Stampede Grounds and some practicing has already been done.

Quite a number have joined the club but there is an opening for a few more to join.

Some of the members in the opening shot made a good showing and arrangements are being made to have a contest with the Medicine Hat Club.

A meeting was held last evening and reports showed that considerable progress had already been made and prospects were most encouraging for the success and interest of the club.

Motions were passed authorizing the officials to purchase a new trap and also to make arrangements for the purchase of clay targets and ammunition.

Those who intend to join should do so at once as the number of members is limited.

## No Action Yet on The Bank Legislation

Govt. Governor Has Not Made  
Proclamation Yet

A proclamation of the Federal disallowance of Alberta's banking and judicature legislation will probably be made this week in the Canadian Gazette instead of in the Royal Gazette of which which would be the customary procedure.

It was learned the proclamation had not been made by T. Gov. Bowen of Alberta. Until that is done the act of the Federal government disallowing the legislation is not complete as far as the courts are concerned.

Alberta Wheat Pool yesterday a payment of \$453,350 to the provincial government. The payment is in connection with financial backing given the Pool by the provincial government, when an over-payment was made to members in 1928.

## Joint Action in Alberta Advised by Liberal Leader

Want All Parties Work Together  
For Second Government

Formation of a central advisory council, consisting of four outstanding businessmen of Alberta, to advise and assist in the action of Liberals, Conservatives and the United Farmers of Alberta in effecting "establishment of a sound business government at Edmonton" was proposed by E. L. Gray, provincial secretary of the Liberal party, at a meeting held in Medicine Hat last Friday evening.

Mr Gray said he had discussed the question with many people but as might be expected he had found a great number of schools of political thought, all having the same object but generally differing in their plan of procedure in attaining such object.

He was of the opinion that the principle of autonomy in the municipalities must be recognized as the basis of any plans for united action and that Liberal officials endeavor to bring with representatives of other political groups a small co-ordinating council and in consultation with such council to endeavor to decide upon a plan of unity suitable to local conditions.

New came today that a British vessel was sunk in the Mediterranean by a mystery submarine. The crew was saved by other vessels.

A wheat crop of 162,000,000 bushels for Western Canada is estimated in a preliminary report issued by the Provincial Wheat Pool organization. It estimates Alberta, 74,500,000 bushels; Saskatchewan, 37,500,000; and Manitoba, 50,000,000. Alberta is placed at an average of 93 bushels per acre.

Maurice Gardiner, farmer in the Bowmontan district was found dead in his car near his home. His car was running and when investigated it was found a hose was attached to the exhaust pipe through the car's bonnet into the car with all windows closed.

## Noted Anglican Minister Passed Away Friday

F Wells Johnson Was A Beloved  
Churchman

News of the sudden death of Very Rev Dean F Wells Johnson, noted Anglican churchman at the age of 72 was received with sincere regrets by many members of St Ambrose church who were acquainted with deceased.

His appointment to the position of Dean was made by Bishop E H Knowles, as his first act following his appointment to the Bishopric in 1936. After five years as rector of St John's church, Moose Jaw, Rev Johnson was made Archdeacon by Bishop M M Harding in 1934.

Deceased was chaplain to the Sons of England lodge and also to the Moose Jaw branch of the Canadian Legion. His was a long eventful life, devoted to helping others. He was priest at St. Appelle, frequently traveling 50 to 70 miles to tend his flock.

While he was still alive it was said of him: "He lived the life of a Good Samaritan every moment of his existence, and thousands blessed his name, of every race and creed."

Special requiem service was held in St Ambrose church yesterday morning for deceased.

Mr J P. W. of Blindfold, has been re-elected Wheat Pool delegate for this sub-district.

Fell Live Stock Show and sale of sheep and swine in Calgary will be held Oct 20, 21, 22.

A terrific typhoon struck Japan today and did considerable damage. Eight large ships were sunk and nearly 200 people were killed. One of the ships was British.

Proclamation of the federal disallowance of Alberta's banking and judicature legislation will probably be made this week in the Canadian Gazette instead of in the royal gazette of the province which would be the customary procedure. Until the proclamation of the Lt. Gov. is made the act of the federal government disallowing the legislation is not complete as courts are concerned.

## To Investigate Farm Land To Plan Irrigation

So Stated Hon J G Gardiner At  
Medicine Hat Meeting

In his address in Medicine Hat last Friday evening Hon J G Gardiner, federal Minister of Agriculture stated:

"We of the government realize as well as the people of the east, that something must be done to re-establish and return to prosperity that part of our country that houses such a great percentage of our people, and that produce those commodities of livelihood upon which we are so much dependent."

"The Fennett government," he said, just prior to the 1935 election inaugurated the Prairie Farmers Rehabilitation plan voting four and three-quarter million dollars to be spent on the rehabilitation of the drought areas and the present Liberal government carries on where their predecessors had left off.

Mr Gardiner stated an advisory committee had been appointed for the purpose of investigating the drought areas suitable for community pastures for livestock and also suitable for irrigation.

## Churches

GORDON MEMORIAL L  
UNITED CHURCH

Rev H. E. V. - Pastor  
Sunday, Sept 4th 1937  
Church School - 10:30  
11:15 a.m. Morning Worship  
Subject "Lost and Found"  
Junior Choir will be present after the holiday and will help in the service.

7:30 Evening Service  
Subject (Labor Day) "Fellowship and Goodwill"  
The senior choir will lead the singing.

Rev H. E. V. Ellison has returned from vacation and will be in charge of all services.

ST. MARY'S CHURCH

Commencing next Sunday the service will be held at 9 a.m. The following Sunday at 10 a.m. In future service will be held at these hours on each other week, these hours on each other week.

ST. AMBROSE CHURCH

Rev H. S. Hammett, Vicar  
Holy Communion 10 a.m. 2nd and 4th Sundays 4-5-50 a.m. Communion

3rd Sunday at 1-00 a.m.  
Evening 7-30 - 8-15 a.m.  
with 4th Sunday at 4-00 a.m. and 4th.

## Close Finish in Exciting Race At Lewes

It isn't often that a horse race finishes as close as this and it is even more rare when two of the jockeys lose their caps. Our picture shows "Angel Bread" with barheaded Gordon Richards up, finishing first during the Lewes race meet, barheaded Redfern next on "Clot.".

FEEB SHOCKS HOUSE OF LORDS

## Serious Losses Sustained In The Transportation Of Livestock To Market

When livestock are loaded on a railway car or a truck and leave the farm where they have been produced for market, producers are apt to think that their job is done. Probably it should be so, and transportation perhaps should have developed to a stage which would guarantee the safety of the animal in the same condition in which the carrier received it. In the final analysis, however, the animal is not produced until it has arrived at the place where it is to be marketed. Existing evidence indicates that many changes take place in the animal body after it leaves its farm home and many of these changes reduce the value of the animal to the trade and consequently effect the cash returns to producers. The remedy for this condition would seem to have its root in producers taking more interest in ensuring reasonable care and handling of their animals while in transit. The losses referred to are in a large degree preventable and it is with the thought of stimulating producers to study the causes of such losses that this article appears here.

Each year approximately three million cattle, half a million calves,

of marketing if they are prepared to take some pains with the job, witness one trucker who last year hauled over one million pounds of livestock with the loss of only one lamb. He consistently used partitions for each contributor's stock, for stock of various kinds and always used chutes for loading and unloading. He loaded with straw and a few cinders, tied up all bulls and horned cattle, used ice for hogs and hot weather, had a canvas shade for his load in hot weather, drove at a moderate speed and always loaded within the capacity of his truck. He made a policy of checking his load every twenty miles and was therefore able to prevent any trouble, which his load might have experienced had they not had the mind of the driver intent on their comfort.

This driver told down several things he did not do as the basis for his success. They were:

- Do not overload.
- Do not put hogs under cattle.
- Do not put calves and lambs to sleep.
- Do not put strange hogs together.
- Do not lift lambs by the wool.
- Do not use a whip or a goad.

The House of Lords was given a severe shock when youthful Lord Morley of Redford rose to denounce the English divorce laws which are of the most rigid type. Explaining that he had married an American girl, the former Barbara Murray, in Paris, and could obtain a divorce in France, the Lord of Redford, standing in his place to discuss the issue from a purely academic standpoint, Lord Morley threw the House into further turmoil when he lighted a cigarette, an unprecedented action.

### Highest Motor Road

French Highway Twists Between Mountains Peaks  
Recently inaugurated the highest automobile road in Europe, the Les Alpes highway, twisting between mountain peaks with an altitude reaching 9,250 feet. The highway, linking Lake Lemano with the Mediterranean sea, required nine years for construction and runs near the famous passes of Mount Cenis and Saint Bernard, the department of Savoie, close to the Italian frontier.

### Made Sketch Valuable

Signature Of Adolf Hitler Discovered By Young Viennese  
The half-effed signature of Adolf Hitler on a sketch of the church in his native Austrian village which turned up at Vienna, raised the value of the drawing to 30,000 Austrian schillings (about \$637). The sketch, which dates from the German chancellor's home-painting days when he turned out such pictures to augment his meagre income, was discovered by a young Viennese while searching through family rubbish.

### Not First Relationship

The fifth relationship between the F. D. Roosevelt and the Teddy Roosevelt is the fourth instance of relationship between the two Presidents of the United States. John Adams and John Quincy Adams were father and son; William Henry Harrison and Benjamin Harrison were grandfather and grandson; and James Madison and Zachary Taylor were second cousins.

Fresh water is found 200 miles at sea off the mouth of the Amazon river; the force of the current carries the fresh water that distance.

Blackberry bushes harbor a rust which attacks wheat.

### Knitted in Strips—Easy to Join

Household Arts by Bruce Brooks  
The knitted strip of Portuguese West Africa cannot swim. This curiosity breaks through its tail, and drowns if it goes out of its depth.

The Greeks are said to have used coal more than 2,000 years ago.

String Make Handsome Household Accessories

PATTERN 5754  
Don't envy your "best friend" her knitted apron! Make one for yourself. It's a grand pattern because for what could be more fascinating than knitting these 4 1/2 inch knitted strips together by rows until you've enough strips of given length to join and make this spread. When you've your apron as a whole, you'll see the interesting "plaid" effect created by the open-work stitches in cross-stitch design. In pattern 5754 you will find complete instructions for making the strips shown, as illustrated in one of the sketches and material requirements; a photograph of a section of the pattern and 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winning Newspaper Club, 175 McDermott Ave., Winnipeg.

There is no Alice Brooks pattern book published

## East Arctic Patrol On The Steamship Nascopie To Secure Valuable Data

### New Treatment For Colds

Two Canadian Investigators Announce Results Of Tests

Referring for the majority of persons suffering with common colds to isolated points in tests made by Drs. E. M. Boyd and W. F. Ford, of Queen's University, Kingston, Ont., which they described in the Canadian Medical Association journal.

The two doctors report investigation shows a considerable part of the population suffer from colds as a result of a deficiency of the essential unsaturated fatty acids in the diet.

These fatty acids they describe as "vitamin F," a concentrated mixture of linoleic and linolenic acids prepared from refined linseed oil.

A series of experiments made on more than 100 medical students to determine the value of the "fatty acid" in prevention and treatment of common colds resulted in reducing colds 64 per cent and diminution of the average duration 78 per cent.

A group of 41 students known to be susceptible to colds were observed without treatment for seven weeks. It was found the students had 65 colds during the 49 days. Figures amounted to an average of 1.54 colds a man with the average duration 11 days.

Following treatment for seven weeks with daily doses of vitamin F the average number of colds was reduced to 3.6 to an improvement of 64 per cent. Average length fell to 3.5 days, a decrease of 78 per cent. Similar tests were made with a group of 65 classified as not being susceptible to colds. Handling data indicated improvement but not to the same extent.

Drs. Boyd and Connell concluded from these results that the few remaining colds were, therefore, due to other factors than the deficiency of such fatty acids.

### Partition Of Palestine

Keeping The Sanctity Of Jerusalem And Bethlehem Inviolable

The royal commission's report on Palestine makes it clear the commission and the British government regard the custody of the holy places of the country "as sacred trust" for all time.

"The partition of Palestine is subject to the overriding necessity of keeping the sanctity of Jerusalem and Bethlehem inviolable and of ensuring free and safe access to them for all peoples of the world," the official summary of the report states.

"The protection of the holy places is an ancient trust, unique in its character and purpose."

"In order to avoid misunderstanding, it should frankly be stated that this trust will only terminate if and when the League of Nations and the League of Nations desire it to do so, and that, while it may be the trustee's (Britain's) duty to promote the well-being and development of the land, it is not intended that in course of time they should stand by themselves as a wholly self-governing community."

"Britain has a separate treaty with the United States under which she is pledged not to modify her Palestine mandate without United States consent."

In Jerusalem, Bethlehem, Nazareth and the Sea of Galilee (Lake Tiberias) under mandate, no question would arise of balancing Arab claims or vice versa.

"All the inhabitants of the territory were to stand on an equal footing. The only 'official language' would be that of the mandatory administration. Good and just government would be the basis principle."

"The parliament of the United Kingdom 'would be willing' to make up any deficit incurred in keeping the mandatory government, the summary said."

The officers were picking out men for a raid, and was making his choice of the unarmored men.

"Are you married, McGuffin?" he asked a footman.

"Aye," he replied, "I can't be married, sir, if I hadna been for this 'war' war I wouldn't have had a day off or a night out."

Sir Samuel Hoare, First Lord of the Admiralty, stated "the two of the three new battleships of the 1937 program would bear the names of Jellison and Beatty."

Construction of the \$40,000,000 battleship Anson will give work to 2,000 men for three and one-half years at Clydebank, Scotland.

Personnel of the east Arctic patrol which sailed on the steamship Nascopie from Montreal recently was announced by the department of mines and resources. The expedition is commanded by Major J. L. McKeown, who has commanded several similar expeditions. It will visit points in Hudson Bay and the Canadian Arctic archipelago.

Dr. L. D. Livingstone, the ship's doctor, will inspect the natives at points of call. He has spent 15 years as medical officer in the eastern Arctic.

Craig Harbor, on Ellesmere Island, most northerly post office in the British empire, will be visited and there is an increasing interest among philatelists to get cancelled postage from that office. Ennie Cravel of the postal service will have charge of the mails on the trip.

Accompanying the expedition are geographers L. A. Mearns of the geological survey, will continue a study of the physical geography of the Arctic regions.

C. H. Hey of the geodetic survey, with his assistant Kenneth Gladstone, will make a series of geodetic determinations at points along the north shore of Baffin Island. Remaining in the north until late October, Mr. Hey and his assistant will return south by the schooner "Nanuk" with a native crew to make a series of geographical determinations at points along the south shore of Baffin Island. Remaining in the north until late October, Mr. Hey and his assistant will return south by the schooner "Nanuk" with a native crew to make a series of geographical determinations at points along the south shore of Baffin Island.

Investigations of certain rivers in Baffin Land and the sea in the vicinity of Lake Labrador will be made by H. M. Rogers, hydrographer of the University of Toronto.

A biological survey of Profluvial Bay will be made by Dr. W. E. Edwards, assistant professor of zoology, McGill University, who will be accompanied by Dr. Macdonald expedition at Hudson as representative of the Canadian government.

G. Glenn Madill of the Dominion Observatory will travel with the patrol as a Chief Surveyor where he will leave the expedition to continue magnetic survey work in the environs of Baker Lake and Repulse Bay, later returning to Ottawa from there.

A motion picture record of the expedition will be made by Richard Philip, who has had a wide experience in taking motion pictures in the eastern and western Arctic during the last 14 years. As a member of the government expedition which flew over the north magnetic pole in 1926, he has obtained the only motion pictures ever taken of that area.

Reference to the expedition will be by Roy D. Cahan, engineer of the Canadian Broadcasting Corporation, who will be in charge of the region program director, as his assistant, will conduct experiments in short wave transmission and reception during the trip.

As historian of the expedition, H. K. Chorley, superintendent of the Department of the Interior in the party at Churchill and make the return voyage to Halifax.

The following R.C.M.P. constables embarked at Montreal for two years' service at points in the Canadian Arctic: A. R. Staples for Fort Burwell; J. Fitzsimmons, Lake Harbour; L. Weston and J. J. Watkins, Fort Harrison; W. T. James, Eskimo Point; L. T. Pyke, Craig Harbor; H. W. Leach, Pond Inlet; H. F. McCabe, Pangnirtung; and D. F. McLaughlin, Repulse Bay.

As in the past, this year's eastern Arctic expedition is expected to be one of much value in the collection of scientific data and other information relative to native and wild life in the far north.

The cruise will cover about 12,000 miles and the ship will make 25 calls and distribute supplies and mail to 45 posts, police stations, traders and missionaries are stationed.

The expedition is expected to return home about the end of September.

Killer in New Bond Street, London, which has had hundreds of prominent patrons, had a customer who had been a bookshop, was closed recently on retirement of George Smith, the senior partner.

"If smoking permitted, conductor?"

"No."

"Well, where did all these legends come from?"

"From people who didn't ask questions."

Only one-tenth of the total available farm land in the United States is used to produce food for human consumption.

A mixed load including Horned Cattle, with a poor partition. Result: Dead hogs, Crippled hogs and bruised carcasses.

half a million lambs and one quarter of one million sheep must be moved to market from the point of production, by the various transportation agencies operating in Canada. Some are moved long distances—hogs from Alberta to Montreal—while others have only to travel a few miles. With the extension of the meat packing business in a westerly direction the long hauls are being greatly reduced and the truck, in consequence, is playing a large part in livestock delivery work.

Losses in transportation take place from bruising, crippling and death. By far the greatest loss results from bruising. A survey carried out by the National Livestock Loss Prevention Board in the United States covering typical shipments uncovered the fact that 2 1/2% of cattle arrivals were bruised sufficiently to lower value, and that most frequently the bruises were found in the region of the valuable cuts. The same survey showed that 20 per cent of all hog arrivals were bruised, mostly in the region of the ham; and that 5 per cent of all sheep arrivals showed bruising. The loss so sustained was a loss to producers which to a great extent was preventable. It reduced the average quality of the carcasses, increased the work required to process the animals in the abattoirs and finally resulted in a less desirable product from the consumer's point of view. To dook the pain and suffering endured by the animal during the process of getting bruised was great loss from a humanitarian standpoint alone, every possible step should be taken to prevent such injury.

Crippling in hogs was found to be four times as great as in sheep in the United States, and twice as great as in cattle and veal. The study of transportation methods shows that more hogs, cattle and sheep were crippled by truck delivery than by rail but more veal calves were crippled by rail delivery than by truck.

Little difference was noted in the number of dead animals of any kind arriving by rail or truck, although the average rail haul was much longer than that of the average truck.

With the development of the motor truck as a transportation agency, new problems arose. Many truckers were men with no experience in handling animals and little appreciation of the injury and loss which they could cause the animal and the owner by improper handling. Poor trucking equipment is a menace to the livestock business and producers should demand equipment which will transport their animals with a reasonable degree of safety, comfort and despatch. Truckers can do a good job

He states further that he always drove at a moderate speed and tried to use his brakes slowly to prevent the huge tongue between the fore-and-aft axles accompany a sharp stop. This man's experience seems to cover the story about successful trucking so well that little more need be said.

In railway shipping cars should be taken in preparing the car. All rails, bolts, splinters or broken lumber should be removed from the walls and floor. Floor tracks should be repaired. The car should and will in all probability be clean on arrival.

For hot weather shade to the depth of one inch has proven to be the best loading. Wiley of Purdue Experimental Station says "Dough loaves averaged just one half as high with sand as they did in cars bedded with other materials. Crippling losses were also lower when sand was used." In hot weather, wetting the straw before loading has proven advisable. In cold weather generous straw bedding over a layer of sand has given best results.

It is well to have the load collected well in advance of the time of train arrival so that they may rest and cool off before loading. Water should be allowed sparingly before shipping. Bulls should be headed first and tied with a halter or rope to the car upright at the height of the head. Hogs, stags, rams and cringles should be penned separately from one another and from other stock, using partitions, now available from the railway companies. Partitions were should be spaced and adequately fastened at each end. Loose or broken partitions are worse than no partitions at all.

In hot weather it has been found advisable to use ice blocks at various points throughout the car for hogs. They lower the temperature and decrease losses. It is suggested that 200 lbs. per car would be sufficient but the amount will depend on the temperature, the load and the distance.

Producers can do a good deal toward preparing their animals for the trip to market to avoid the losses due to stress, injury and disease. Unloading should be a leading object. It will save broken legs and bruises unnecessarily produced through rough unloading on a steep step. Dehorning of all cattle would be as productive of results as any one thing producers could do. Feeding and watering in a moderate way before shipping will leave the animal normal while the unloading of the stomach with feed and water—too common a practice—causes inflammation in hogs, scours and redness in cattle and sheep and a heavy shrink in all animals.

**TOWN OF REDCLIFF  
The Local Tax Arrears  
Consolidation Act**

The Council of the Town of Redcliff has passed a By-law declaring that the above Act will be applicable to the Town of Redcliff and said By-law has been approved by the Minister of Municipal Affairs in writing.

All consolidated arrears of taxes shall under this Act be payable by five equal annual installments together with the current taxes on or before the 15th day of December except as hereinafter mentioned.

The following persons may make application to the Council to come under the provisions of the above Act.

Any person, firm or corporation who is the owner of any parcel of land in the Town of Redcliff, against the title of which, there is subsisting notification for arrears under "The Tax Recovery Act, 1923."

Any person who has been a bona fide resident of the Town of Redcliff for 12 months immediately preceding the date of his application, in case of lands which have been finally acquired by the Town of Redcliff but not sold, or such persons personal representative.

In such cases where the applicant's property is to be exposed for sale at the forthcoming Tax Sale on Sept. 15th, 1937, such applicants should make their applications in time for the Council to consider same previous to that date.

Upon receipt of the application, the Secretary Treasurer shall calculate the amount required to pay the arrears of taxes, if the same were consolidated, and the applicant shall deposit with the Secretary Treasurer one fifth of such sum.

In such cases where the applicant to consolidate is made after the 5th day of November 1937 the applicant shall also deposit with the Secretary Treasurer sufficient to pay the current year's taxes.

In any event the current

year's taxes shall be paid by the applicant on or before the 15th day of December.

When the application is granted, the deposit shall be applied on the applicant's consolidated arrears, otherwise it shall be repaid to him.

In case the application is not granted, provision is made in said Act for an appeal to the Minister of Municipal Affairs.

No buildings, fences, fixtures or other improvements shall be removed from any land in respect to which there is a subsisting tax consolidation agreement.

To those who properly come under the provisions of the above Act, all proceedings under the Tax Recovery Act 1923 are suspended in respect to the properties involved while such consolidation agreement is in force.

## Development In North

### Public Attention Attracted To This Area Of Canada In Recent Years

Canada's land of the midnight sun is receiving public attention unprecedented in recent years as summer set in over the 1,300,000 square miles of the Northwest Territories. Developments are combining to make this a banner year in the north.

Science is prepared to scan the Arctic and sub-Arctic areas closer than ever before, entering in the wake of achievements that have given the world from the north in the geography of the territories, stretching from the northern boundaries of the three prairie provinces to the north pole.

At the last census in 1931 the territories had a population of 9,723—1,607 whites, 4,016 Indians and 4,470 Eskimos. Even men familiar with the Arctic would scarcely hazard a guess as to the population when the 1941 census is made.

The northland has many an outstanding development this summer. Here are some:

Promising reports from gold explorations in Gordon Lake, Yellowknife River and Oulicat Island on Great Slave Lake; has metal discoveries at Pine Point, also in Great Slave Lake vicinity; experienced pitcheblende recovery at Great Bear Lake from which radium and silver are obtained.

Expansion in flying facilities, carrying passengers to hitherto inaccessible points.

Scheduled trip of the government minister inside the Arctic circle early in August when he will visit Alert at the mouth of the Mackenzie River on Beaufort Sea.

Visit of 19 distinguished British and United States scientists to the territories at various points while seven British scientists come also having spent the winter in far-north investigations.

Bailing of the steamship Naacop from Montreal, with Canadian sailors and surveyors on board, to make an extensive program in the Arctic archipelago. Tests are also to be made by the Naacop of the feasibility of broadcasting from deep in the Arctic over a national hook-up.

Flight of the Soviet aircraft across the pole and over the Northwest Territories, which focused world attention on the geography of the territories.

The experiment of transplanting reindeer from Alaska to the MacKenzie River delta, which is expected to give a success as the establishment of the Wood Buffalo park some years ago.

The territories are therefore becoming a mighty enterprise administered by the Territorial Council with headquarters in Ottawa. This council is composed of experts in the needs and possibilities of the north, and has all civil servants holding other responsible positions and serve on the council without additional pay.

The council acts under the Dominion government and more particularly under Hon. T. A. Crerar, minister of mines and technical assistance to provinces the Dominion, province and the municipalities all play a part in governing, but in the unpopulated Northwest Territories the council does the entire job.

### Unusual House In England

#### Ten-Room Structure Was Built Entirely From Junk

Front's dome, faceted, rubbish barrels and refuse bins have come the materials for England's most unusual house. Constructed after seven years the ten-room structure is entirely in "junk material" and is the work of a retired seaman, 75-year-old John Tipton of Chichester. Broken plates, dishes, tumbler and bottles make up the largest part of the material, which at a distance gives the impression of rich marble. Tipton drew out his design on a board, placed the material in tin fragments face downwards and then cemented them together into a black. Thousands of blocks went into making the house.

#### The Residence Of Kings

Buckingham Palace has celebrated its 100th anniversary as the residence of sovereigns. On July 13, 1837, Queen Victoria chose to reside at Buckingham Palace with her mother, the Duchess of Kent, although, at the time, it was "it is hardly big enough."

The cost of the Metropolitan Police during the past year, was \$47,176,330. On January 1 the strength of the force was 15,000 including more than 13,000 constables.

British railways report that while fewer passengers are using their lines than last year the receipts are greater.

## Old Custom May Vanish

### Doctors Said To Consider Handshake A Germ Spreader

In the handshake to become extinct? According to news reports, doctors are frowning upon it as a germ-spreader and promoter of European epidemics, and certain European nations are banning it in favor of substitutes.

Substitutes for the handshake are already in use by a large portion of the earth's population. Inhabitants of black Terra del Fuogo welcome the rare stranger who comes there with a back-swing and a back-patting, meanwhile jumping up and down. An African West Coast negro, on greeting a friend, may fling himself to his knees and kiss the ground three times. Frenchmen kiss each other on both cheeks. Iterations of old bowed themselves to the ground seven times.

Andapan Islanders bow in one another's hands with a cooing sound. Indians on the Gulf of Mexico blow into each other's ears. Africans of the French colony of Dahomey twist their finger knuckles until they emit a loud crack. Eskimos rub noses. They are bewildered when they see a handshake, assuming it to signify that when your right hand grows numb, it is antiquity was equivalent to a handshake.

Handshaking in many forms is an old and honorable custom. To join in a handshake was equivalent to signing a peace treaty, with the advantage that it left no scrap of paper to be torn up. Early Greeks respected the right hand of fellowship, now preserved in many religious and fraternal organizations. In the Middle Ages, the handshake was introduced into the marriage ceremony among the Hindus and sometimes among Christians. However, it provides a prize fight. A Chinese, who show how pleased he is to encounter you, shakes his own hands. In the Banks Islands of the Pacific, a man hooks the middle finger of his right hand with yours and pulls it away with a crack with his hand to signify that you are cherished in his heart and are henceforth are entitled to a bit of affection.

Yet, among all these salutations, is the handshake, which is unhygienic, then, say, the rubbing of noses? The radio robot proved its effectiveness in two recent emergency cases, he said. Signals sent out by the freighter Guardian when it was struck June 25 at Lohos Bay, Cuba, set off automatic alarms on vessels 80 to 1,000 miles away. Alarms from the British freighter St. Albans, which burst at sea the following day, were picked up 130 miles away.

Nearly 300 ships have been equipped with the alarm, which provides 24-hour vigilance, Panell said.

Good Fish For Everyone

A conductor in an exchange suggests that the swimming pool used by the Boy Scouts would save dozens of lives this summer if everyone adopted it. The general idea is, no lone swimmers. Boys are paired off so that each may stay close to his companion. Family groups and other groups could use this plan to good effect.

The decrease in wildlife throughout Europe has led to appointment of a sub-committee by the International Committee for Bird Preservation to investigate the cause and find remedies.

Photographs printed on metal by a new process are said to be everlasting. The image is burnt in on an alloy.

Secure Weather Data

Additions Made To The Staff Of Dominion Meteorological Bureau

Five new men have been added to the staff of the Dominion Meteorological Bureau at Toronto in view of the demand for additional weather data in connection with the projected new-Canada air service. John Patterson, chief of the weather bureau, stated the staff has now been raised to 14 men and will be obliged to furnish full and accurate bulletins on weather conditions along the trans-Canada air lines. Special details of the aviation branch demand intensive training, he said, and the new members are qualified.

### Everybody Stayed

A minister once delivered a sermon in a church where many of the congregation had the habit of going out before the close of the meeting. He was advised of this beforehand.

He opened his meeting by saying encouragingly "My friends, I am going to speak to two classes tonight: first, to the ignorant people, and then to the intelligent people."

After earnestly addressing the supposedly ignorant people for a while he said that they could now take their hats and go.

The entire congregation heard him to the end.

## CANADIAN BOYS PREPARE FOR ANNUAL SHOOT AT BISLEY

Some of the members of the Canadian Rifle Rifle team going out to the ranges for the annual rifle shooting meetings which attract the best shots in the British Empire.

### Old Way Is Best

#### Community Feeding Centres Not Likely To Prove Popular

Professor James Lusk of Stanford University, speaking at Vancouver, was strongly in favor of feeding mothers out of the kitchen and replacing her with expert dietitians in community feeding centres. Not like it, however, that community feeding will make much headway.

Early Quakers respected the right hand of fellowship, now preserved in many religious and fraternal organizations. In the Middle Ages, the handshake was introduced into the marriage ceremony among the Hindus and sometimes among Christians. However, it provides a prize fight. A Chinese, who show how pleased he is to encounter you, shakes his own hands. In the Banks Islands of the Pacific, a man hooks the middle finger of his right hand with yours and pulls it away with a crack with his hand to signify that you are cherished in his heart and are henceforth are entitled to a bit of affection.

Yet, among all these salutations, is the handshake, which is unhygienic, then, say, the rubbing of noses? The radio robot proved its effectiveness in two recent emergency cases, he said. Signals sent out by the freighter Guardian when it was struck June 25 at Lohos Bay, Cuba, set off automatic alarms on vessels 80 to 1,000 miles away. Alarms from the British freighter St. Albans, which burst at sea the following day, were picked up 130 miles away.

Nearly 300 ships have been equipped with the alarm, which provides 24-hour vigilance, Panell said.

Good Fish For Everyone

A conductor in an exchange suggests that the swimming pool used by the Boy Scouts would save dozens of lives this summer if everyone adopted it. The general idea is, no lone swimmers. Boys are paired off so that each may stay close to his companion. Family groups and other groups could use this plan to good effect.

The decrease in wildlife throughout Europe has led to appointment of a sub-committee by the International Committee for Bird Preservation to investigate the cause and find remedies.

Photographs printed on metal by a new process are said to be everlasting. The image is burnt in on an alloy.

He opened his meeting by saying encouragingly "My friends, I am going to speak to two classes tonight: first, to the ignorant people, and then to the intelligent people."

After earnestly addressing the supposedly ignorant people for a while he said that they could now take their hats and go.

The entire congregation heard him to the end.

### Honored By King George

#### Veteran Engineer Of The "Constitution" Receives Decoration

Tom Clarke, veteran engineer of the "Constitution" ship, crack train which took the king and queen to London from Edinburgh, had an inventory all to himself on the platform of Euston station.

After the king had alighted, Clarke was summoned by Sir Joseph Wynn, chairman of the London, Midland and Scottish Railway, who headed a welcoming party at the station. "Good morning, Tom," Sir Joseph called, "the king is something for you."

Clarke, hastily donned a clean pair of overalls, gave his boots a quick shine, wiped his hands and walked to the king's compartment. There he received the medal of the Order of the British Empire from His Majesty's hands.

Clarke said afterwards the king had been hit by the news of the "Constitution" ship, which recently inaugurated a six-hour service between London and Edinburgh, and commended him on the achievement.

The engineer, who has seen more than 40 years service with the railway, received the decoration for "meritorious service" in the coronation honours list. The royal family were returning to London after a week's visit to Scotland.

### Assisted Immigration

#### Dominion Government Not Ready Yet To End Co-operation

The British government is ready at this time to co-operate with overseas governments in suitable schemes where, after good prospects for emigrants, Dominion Secretary Malcolm MacDonald told the British House of Commons.

Discussions with dominion ministers at the Imperial conference showed, however, he said, that none of the dominions governments was ready at the present time to co-operate in schemes of assisted migration.

Sir Henry Pugs Croft, Canadian minister, said that in the three provinces of Canada have definitely said they are ready to consider schemes.

MacDonald: "The authority in the matter is the Dominion government."

### Newspaper Advertising

The Amsterdam Echo says it is impossible to think of anyone reading anything who doesn't read the newspapers as well. Thus, while some advertising medium reach of some of the people some of the time, newspapers reach all of the people all of the time.

## BRITAIN'S LATEST CHALLENGE TO ATLANTIC FLYING

Our photograph shows the de Havilland Albatross plane, which is to fly the Atlantic Ocean shortly, on display at Hatfield Aerodrome during the recent flying display. This giant craft has four engines, retractable undercarriage and many other features.

## Women's Institutes

### Rural Women Organization Now Functioning In Every Province

The story of the origin and development of the Women's Institutes of Canada is told in the last issue of "The" the magazine of the Health League of Canada.

This fine organization of rural women was inaugurated in 1909 by the establishment on February 19th, 1907, of the first Women's Institute in the town of a South-west township, Wentworth county. The primary object was to provide a means for farm and village women to meet regularly to discuss their problems and to acquire information concerning their responsibilities as housewives and citizens. This pioneer branch is now known as the History Creek Women's Institute.

By the year 1909, there were 23 Women's Institutes in Ontario with a membership of 1002, and at the end of 1913 the number had been increased to 1321 with a total membership of no less than 42,000.

Women's Institutes or similar organizations are now functioning in every province of Canada. The present-day objectives may be summarized as follows:

1. To help women to acquire sound and improved practices for greater domestic economy and better health.
2. To discover, stimulate and train leadership.
3. To promote these objectives, direct expression was held in which the program includes instruction in matters of clothing, housework, health, and the importance of the use of clothing. In the short course is given in styling, the use of commercial patterns, garment finishes, etc.

An important part of the training pertains to health. There is a five-day course in health education usually given by a graduate nurse on such matters as home care of the sick; how to care for common emergencies; care of mother and baby; control of communicable diseases and first aid.

The Women's Institutes do well to devote considerable attention to the health of their members, for in such illness originates — the child. Because of this fact, disease-preventive measures should begin among children.

Heart disease, the greatest killer of the race, has, in the majority of cases, its seeds sown by the infection of childhood.

Tuberculosis is implanted in the early years of life often from the milk of the cow or from an open case in the family.

The infections may in large measure be prevented, tuberculosis may be prevented. If not prevented, these and many other afflictions, if discovered early, may have their fatal effects delayed. This is one of the directions in which the Women's Institutes might profitably show their influence.

### Rescued By Fellow Workers

#### Man Trapped In Packing Plant Had Narrow Escape

Trapped in sack-deep ice in a city packing plant at Edmonton last night, Philip Orpin was rescued alive by fellow workers in a thrilling half-hour battle against death by freezing.

Struck by a steel pipe at an artificially-made ice lumps in a storage tank which leads down to refrigeration cars at the side of the building, he came suddenly through a "hollow spot" and found himself in ice up to his eyebrows.

With desperate strength, he plucked with bare hands at the ice around his face, cleared away to expose a steel pipe, then shouted for help.

Workers dug him out with shovels, hauled him back to the surface, and then, hauled his clear with a rope fastened under his armpits.

His only rescuer was a child — "and not even a severe one," officials said.

He could have frozen solid in a few minutes, or stifled, or both, said one fellow-worker.

### Times Told Strawberries

The old North Devonshire town, Combe Martin, grows strawberries that are strawberries. The winning entry at a recent strawberry competition comprised four berries to the pound and seven bins were required to eat each berry. One strawberry weighed six ounces.

Troust: "When I was here last there were two strawberries. What has become of the other one?"

Native: "We had to take it down."

Troust: "Why?"

Native: "There was only wood enough for one."

### If potatoes are tubers, are exposed to frost, their small sugar content will increase, though otherwise they may be damaged.

Monday Oct. 11th has been  
set as Thanksgiving Day.

As next Monday will be Labor  
Day it will be observed as  
a general holiday.

Rev. and Mrs. Ellison and Joe  
who have been holidaying at  
Balf for a few weeks, returned  
home last Sunday.

Last Sunday Mrs. McKay  
celebrated her birthday and to  
celebrate the occasion all her  
grandchildren were at the day  
dinner.

Mrs. W. E. Moore and daughter,  
Peace River, spent last Mon-  
day with the former niece, Mrs.  
W. W. Cunn and Mr. Cunn. Miss  
Miller of Medicine Hat accom-  
panied them.

Wheat cutting in Alberta is  
now in full swing. Heavy down-  
and showers have caused fre-  
quent delays and grain is ripen-  
ing very slowly. About 40% of  
the wheat has been cut.

Mr. J. E. Reid, who has been  
ranching north of town for a num-  
ber of years, left last Saturday  
with a car load of stock and im-  
plements for Mission, B. C. where  
he has purchased a farm and  
will reside in future. Mrs. Reid  
and family are leaving this week  
end to join him.
